

ANDREW ARSENAULT

Senior Systems / Solutions / Endpoint Engineer

PROFESSIONAL SUMMARY

Senior Systems/Solutions Engineer with 10+ years leading enterprise IT platform engineering, identity and access management (IAM), and global endpoint management programs. Proven owner of mission-critical SaaS platforms (Slack, Okta, Google Workspace), with a track record of architecting IAM and provisioning pipelines and building automation that eliminates operational toil at scale — including 600+ hours/year in efficiency gains delivered through custom bots and workflow engineering. Deep hands-on expertise across Microsoft Intune/Autopilot, JAMF Pro, Azure/Entra ID, Okta SSO/SCIM/Workflows, and Infrastructure-as-Code (Terraform). Early adopter of generative AI and MCP-based automation, with direct experience validating and rolling out AI-enabled enterprise platform features. Recognized for cross-functional leadership, incident command during high-severity events, and mentoring engineering talent in fast-paced, security-first environments.

CORE COMPETENCIES

Endpoint & Device Mgmt	Identity & Access Mgmt	Automation & DevOps	Platforms & Monitoring
Microsoft Intune / Autopilot	Okta (SSO, SCIM, Workflows)	PowerShell & Python	Slack Platform & Bots
JAMF Pro (Certified Admin)	Azure / Entra ID (AAD)	Terraform / IaC	Datadog & Log Analytics
Google Workspace MDM	SAML / OIDC / OAuth	Buildkite / GitHub Actions	Jira / Confluence
WorkspaceOne	RBAC & Access Governance	Generative AI / MCP	Windows / macOS / Linux

PROFESSIONAL EXPERIENCE

Senior Systems Engineer | Coinbase March 2022 – Present

- Own Slack as enterprise platform and service owner — lead governance, app-security reviews, SCIM behavior, AI-feature rollout controls, and elevated-scope approval processes for a security-critical, publicly traded fintech.
- Re-architected IAM provisioning across Okta, LDAP, and Workday → Okta → Slack pipelines, replacing static LDAP groups with a dynamic, attribute-driven model that eliminated manual access provisioning organization-wide.
- Served as IT DRI for the Google Workspace MCP server launch, leading pre-release testing, OAuth flow validation, and technical feedback on context-window and generative AI integration patterns.
- Directed the Slack Webhook Proxy deprecation, using Datadog telemetry to identify legacy consumers and migrating them to native API integrations and custom Slack apps, reducing technical debt at scale.
- Engineered custom Slack bots and Jira workflow automations that eliminated 600+ hours/year of manual work, enabling self-service access provisioning for support teams.
- Maintain GitHub repositories and Buildkite CI/CD pipelines for all IT automation code, enforcing code-review standards and compliance checks.
- Recognized by ESTO leadership for leading concurrent incident responses and delivering platform engineering solutions for partner teams under tight deadlines.
- Administer Google Workspace email compliance and Smarsh archiving; partner directly with Google engineering on API-driven URL allowlisting, content-compliance rules, and enterprise mail routing.

Senior Windows Client Platform Engineer (Contract) | Okta May 2024 – September 2024

Concurrent contract engagement, delivered in parallel with full-time role at Coinbase.

- Managed a global endpoint fleet across macOS, Windows, iOS, Android, ChromeOS, and Linux using Intune, JAMF Pro, WorkspaceOne, and Google Workspace MDM, with a focus on scalability, security compliance, and fleet-health visibility via Looker dashboards.
- Led endpoint standardization and cross-platform policy alignment initiatives across a distributed global workforce.
- Executed MDM server upgrades using infrastructure-as-code to reduce downtime; administered Azure group memberships and RBAC with Terraform.
- Designed a custom Temporal workflow to automate device offboarding — remote lock, lock-key escrow to Oomnitza, and DynamoDB audit logging for compliance.

- Led greenfield Azure environment setup (Log Analytics, Key Vaults, Automation Accounts, Runbooks, Intune/Autopilot), establishing a scalable cloud management foundation.
- Built Azure Log Analytics dashboards tracking OS versions, patch compliance, new enrollments, and Intune/Azure audit logs.
- Deployed custom AutoPkg/Munki solutions for macOS patching, authoring custom recipes and processors; used PSADT and Winget for Windows application management.
- Designed SAML/OIDC application integrations and custom Okta Workflows for downstream provisioning triggered by Jira requests, eliminating manual steps.
- Mentored junior engineers and cross-trained help desk staff on low-toil tasks, freeing senior capacity for platform work.

Client Platform Engineer – Windows | Peloton Interactive *June 2021 – March 2022*

- Managed a global endpoint fleet across macOS, Windows, Linux, ChromeOS, iOS, and Android using Intune, JAMF, Chef, and Ansible.
- Built complex PowerShell scripts for zero-touch enrollment (ZTE) via Autopilot and Azure Log Analytics dashboards for OS/patch compliance metrics.
- Identified and remediated Windows OS issues using PowerShell Proactive Remediations; managed Windows 10, EM+S, M365 licensing, and Azure Active Directory.

Endpoint Management Consultant | SystemCenterDudes *January 2021 – March 2022*

- Designed and implemented cloud device management solutions, guiding clients through migrations from Workspace ONE and JAMF to Intune across Windows, macOS, iOS, and Android.
- Configured compliance policies, app protection policies, conditional access, and security baselines; delivered client training on security best practices.

Digital Technology Lead | Nova Scotia Community College *December 2016 – June 2021*

- Led the SCCM/MECM software packaging and deployment team, planning and deploying 100+ application packages and complex task sequences province-wide for BIOS updates, encryption, and Windows feature upgrades.
- Implemented Intune MDM and Autopilot for loaner devices; designed and deployed a college-wide Windows 10 base image via Windows Deployment Services.
- Designed and launched the TeamDynamix IT service desk and knowledge base (500+ services, hundreds of KB articles); led change management implementation college-wide.
- Performed vulnerability scanning (Nessus), rogue device detection (NMAP), and network analysis (Wireshark); configured an ELK stack to monitor Windows event logs on CentOS.
- Built and maintained PowerShell script libraries for compliance, remediation, and reporting; trained technicians province-wide on SCCM/MECM and image deployment.

EARLIER EXPERIENCE

Digital Technology Analyst — Nova Scotia Community College *April 2015 – December 2016*

IT Security Administrator — Sobeys Corporate *February 2014 – April 2015*

Technical Consultant — Staples Canada *March 2013 – March 2014*

CERTIFICATIONS

JAMF Certified Administrator • JAMF Certified Technician • ITIL Foundations V3

EDUCATION

Information Systems Specialist — CompuCollege | 2004
